

Methodology

- Create project plan
- Conduct kick-off meeting
- Assess technical infrastructure
- Install software and licenses
- Quality check

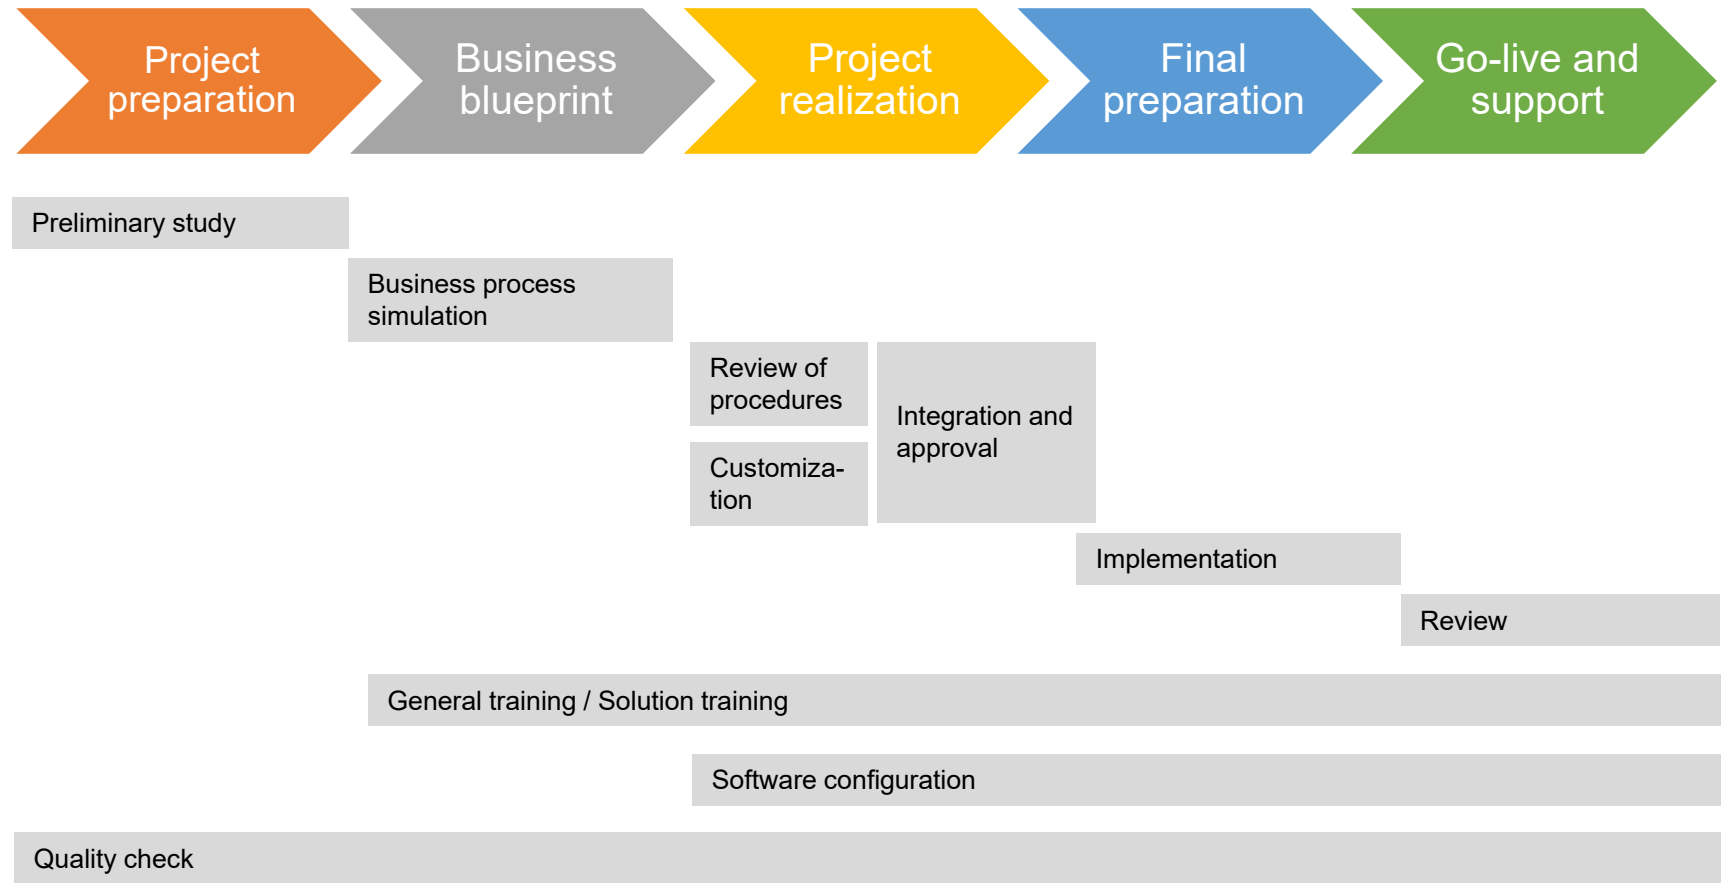

- Schedule requirements gathering workshops
- Gather detailed business requirements
- Define data migration requirements
- Document blueprint configuration
- Identify and address scope changes
- Quality check

- Initialize and configure production system per blueprint
- Migrate data from legacy system
- Validate and test business processes
- Develop end-user training
- Plan for production support and cutover
- Manage change to company and user roles
- Quality check

- Establish support plan
- Train end users and administrators
- Execute cutover and run pilot processes
- Quality check

- Monitor and support live environment
- Close out all open issues
- Implement support plan
- Project closing
- Quality check

Methodology

Methodology

The ASAP methodology gives you a comprehensive way to streamline the implementation, upgrade, and enhancement of SAP software. ASAP offers you the following **benefits**:

- **Reduced total cost of implementation** by embedding the principles of SAP Advanced Delivery Management into a streamlined and modular implementation road map for ASAP
- **Choice of Agile or Standard implementation** approach of your SAP Solution
- Content-rich implementation accelerators, **templates**, and **guides** for implementation projects from strategy to operations
- Transparent **value delivery** through consistent reflection of the business case
- **Efficient project governance**, quality management, and guidance for Agile implementation projects, business process Management, and traditional implementation projects
- Approach that combines **user centric design**, business processes and IT architecture
- Coverage of the **entire project life-cycle** – from evaluation through delivery to post project solution management and operations
